

What is claimed is:

1. A multichannel acoustic signal reproducing apparatus of a movable type, capable of reproducing surround phonic sound and having at least three-dimensional speakers, comprising:

output means for driving left and right main channel speakers.

2. A multichannel acoustic signal reproducing apparatus comprising at least:

a center speaker;

left and right speakers separable from a housing;

recording and reproducing means capable of recording and reproducing a recording medium;

surround decoding means for decoding a multichannel acoustic signal from the recording and reproducing means to surround phonic sound;

switching means for reproducing a predetermined number of channels of the multichannel acoustic signal through the center speaker and the left and right speakers, and switching and outputting remaining channels of the multichannel acoustic signal; and

control means for controlling the recording and reproducing means, the surround decoding means and the switching means, and

wherein channel signals of the remaining channels from the switching means are supplied to a target having speakers and capable of recording the channel signals, and reproduced as surround phonic sound through the control means, the target being a television receiver or an acoustic equipment.

3. The multichannel acoustic signal reproducing apparatus according to claim 2, wherein

an output signal from the output means is transmitted to the target of the a television receiver etc. having the main speakers by a wire consisting of one wire or wirelessly; and the speakers of the multichannel acoustic signal reproducing apparatus are used as rear speakers.
